Kylburn

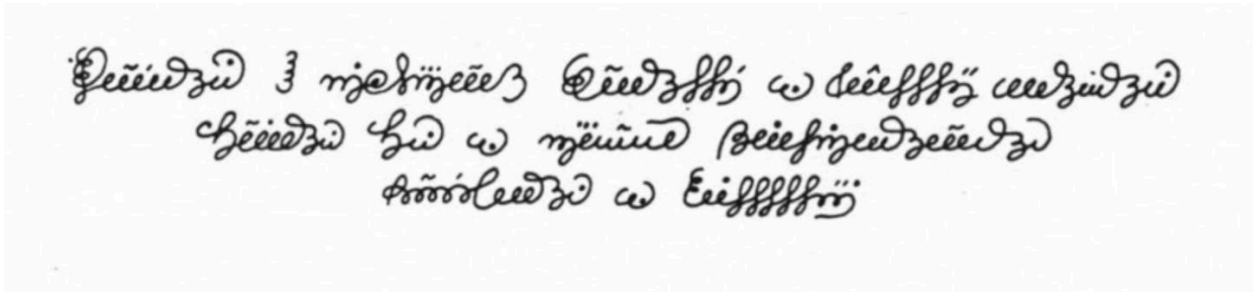
ABBREVIATIONS AND SYMBOLS
LXWX - Line number X, Word number X
MPT - MarcoP-transliteration, a Seraphine transliteration system as described here.

A	B	C	D	E	 G	L	M	O
P	R	S	W	X	Z	?	b	c
d	e	f	g	i	j	l	n	o
p	r	s	t	u	y			

A basic grid for the MPT.
CS-Codex Seraphinianus
EVA- European Voynich Alphabet, a transliteration system for the Voynich Manuscript

I am using the page number as listed on the Internet archive.
###

Page 1 - “Dedication page”



The glyph on L1W5, L2W3, L3W2, represented in MPT as {Wd} is repeated, possibly homaging a grammatical particle.

There exists a repetition of strokes, such as MPT {e}, MPT {f}, and MPT {o}. As with most words in the CS, the “long words” usually end in a “up-hook” (i.e. a curved line above the typography meanline)[1] or a “down-hook” (i.e. a curved line below the typography baseline).

[1]This may be inspired by the Voynich manuscript word endings, very commonly ending with EVA {in} or EVA {iin}.
